FLOORTEC Underfloor heating

NO COMPROMISE IN QUALITY AS MYSON USED IN NEW HOMES

Myson FLOORTEC underfloor heating and Plan Compact radiators have been installed in two stunning new four-bedroom, detached houses at Colwall, Malvern, to deliver a complete heating solution. The houses have been built to the highest specification by Court Property, encompassing contemporary design with the latest and best features to deliver premium luxury to the new owners. Myson products were chosen because of the quality and reputation of the brand, as well as the levels of service available from the design team.

Mark Philpotts of Court Property explained, "We wanted to ensure that whoever purchased the properties were reassured that the quality of build and finish was guaranteed throughout, including the heating. We only wanted to have products that were recognisably the best, so that buyers would know that they were getting what they paid for. Underfloor heating is a must for high specification housing and the widely recognised quality of Myson products led us to choose FLOORTEC underfloor heating for the ground floors. We also chose to install Myson Plan Compact flat panel radiators upstairs where, because of the way in which the houses are built, underfloor wasn't an option. Because of the reputation of the Myson brand we knew that we would be happy with the results."

He continued, "We've found that house buyers are reassured by the presence of the Myson brand in our properties, because they know Myson delivers quality and longevity. The feedback we've received from the new owners has been very satisfying and we intend to continue to use Myson products in our properties because we're very happy with them, and also with the support we receive from their design team."

The properties in Colwall, near Malvern, have been designed and built by Court Property to the highest levels of environmental efficiency and have gas fired boilers that serve a carefully controlled zoned heating system. The Myson FLOORTEC underfloor heating, which is installed downstairs, guarantees maximum comfort. On the upper floor of each property, Myson Plan Compact flat panel radiators have been installed. These integrate beautifully with the heating system and the clean, contemporary design of the house interiors.

"Underfloor heating has become fairly standard in high specification housing," said Michelle Taylor, Product Manager for Myson Underfloor Heating. "Myson FLOORTEC underfloor heating, together with Plan Compact radiators, allows installers and consumers to enjoy the best of both worlds in reliability, comfort and style, with the very highest quality design and manufacture. It's gratifying to know that Myson products have such a good reputation with house buyers and across the building trade; and that their very presence helps to persuade buyers of the quality of design and build of a property. In this case, everyone can see that already beautifully built homes benefit even further from the inclusion of the Myson range."

Myson FLOORTEC underfloor heating is an extremely versatile product with an excellent reputation, suitable for use with different heat sources and low temperature heating systems, with stone, wooden, carpet and laminate flooring, as well as with a range of floor types, including floating, solid and suspended floors. Myson FLOORTEC heating systems work as a part of a complete heating solution with a combination of heat emitters.
